DESCRIPTORS: *Concrete, Temperature, Thermal
stresses, Mechanical properties, Quality control.

Strong heat development in concrete during setting
and hardening can lead to thermal damage. Causes of
high temperature in concrete are analyzed. The cited
results of temperature measurements in concrete of
structural members should make it possible to
estimate the expected temperature rise in concrete in
various structural elements. Fresh (young) concrete
is particularly vulnerable to cracking. It not only has

CONDUCTIVITY MEASUREMENTS ON SELENIUM,

[1963] 23p. 35 refs.

Order from SLA \$2.60

63-10912

Partial trans. (p. 233-241, 248-252) of Annalen der Physik (East Germany) 1954 [ser. 6] v. 14 [no. 6] p. 233-252.

DESCRIPTORS: *Selenium, *Electrical conductance, Temperature, Semiconductors, Impurities, Bromine, Solids, Liquids, Vacuum apparatus, Crystal structure.

The dependence of conductivity on temperature of solid and liquid selenium is essentially determined by the purity of the selenium and is substantially influenced by the introduction of oxygen in the case of highly purified selenium. An E-value of 2.2-2.9 ev. was measured from a very reproducible $\log \sigma \sim 1/T$ straight line (Physics--Solid State, TT, v. 10, no. 2) (over)

I. Eckart, F.
